MANUFACTURING

CUTTING-EDGE TECHNOLOGY.

ELITE ENGINEERING CAPABILITIES.

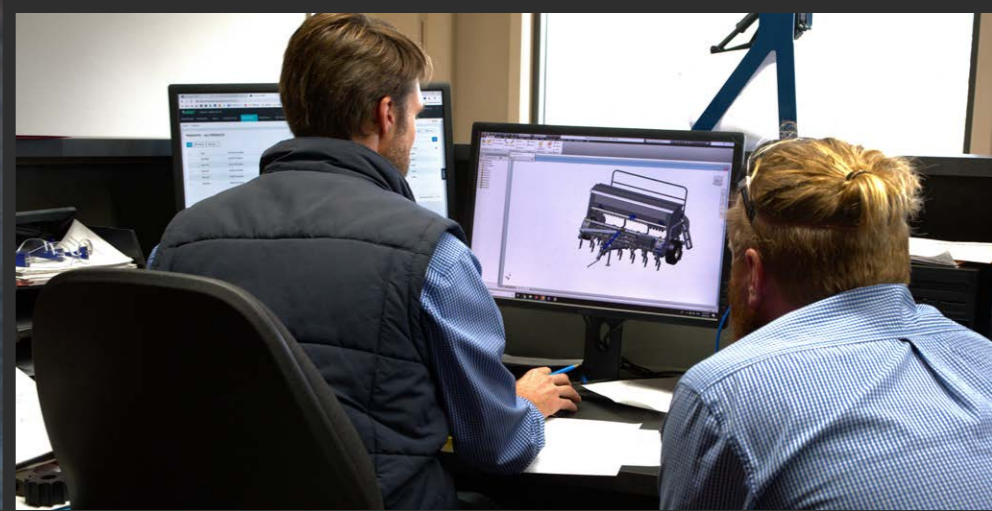

At the heart of our metalworking arsenal, we've introduced a brand-new Bystronic dual 6.0 m bed laser cutter. This precision machine excels at cutting materials like stainless steel, aluminium, and mild steel, effortlessly handling thicknesses of up to 16mm. Our workshop also boasts plasma cutting capabilities, capable of handling materials up to 25mm in thickness.

We maintain a substantial stock of various plate types, including BIZ400. We can swiftly access the materials needed for a wide range of projects, ensuring there are no delays due to material shortages.

We take pride in our CNC press, which gives us enhanced efficiency and proficiency in cutting and bending sheet and plate metal.

Our workshop is also well-equipped with two advanced CNC lathes for machining specialist parts, as well as several large sheet rollers.

On top of our cutting, bending and machining capabilities, we also offer robotic welding, experienced manual welding, hardfacing, industrial painting, as well as CAD design and drafting. We can provide a comprehensive high-end manufacturing solution for any industry and product from start to finish.

PROVEN QUALITY & EXPERIENCE.

In addition to our metalworking capabilities, our parent company is the proud owner and manufacturer of several OEM brands in the agricultural machinery industry, known for their quality, reliability and durability:

- ▶ **Davimac Chaser Bins** - Grain Carts
- ▶ **Agrowplow** - Deep Tillage Ploughs & Seeding Equipment

This knowledge and expertise equips us with a depth of understanding of the entire lifecycle of product development, from design and manufacturing to distribution.

Our tailored manufacturing solutions are built on proven experience that enables us to anticipate challenges, innovate swiftly, and deliver outcomes that align seamlessly with the unique demands of different industries.

WE MAKE THE COMPLEX, SIMPLE.

EFFICIENT, PRACTICAL & COST-EFFECTIVE.

Our skill, precise equipment, and optimised processes ensure that we complete projects with the utmost accuracy and efficiency and deliver outstanding results within budget and promised timelines.

Our commitment to “lean manufacturing” ensures every project, regardless of its scope or complexity, is marked by streamlined and efficient processes alongside a dedication to minimizing waste in terms of materials, time and resources.

We've successfully undertaken numerous projects for a diverse range of clients, each serving as a testament to our commitment to excellence, underscoring our capability to deliver superior outcomes that meet and exceed client expectations.

Our mission is to bring the benefits of our **manufacturing expertise** to a wider market, delivering **high-end engineering solutions** that drive success across multiple industries.
